AGV LISTA: THE ALL-IN-ONE SOLUTION FOR YOUR INTRALOGISTICS

Intralogistic automation also makes an important contribution to optimising processes within your company. That's why LISTA offers a range of automated guided vehicles (AGVs) that are perfectly suited to different areas of application. LISTA AGVs travel along freely programmable routes throughout the facility and can transport a wide range of goods quickly, safely and cost-effectively, from the warehouse to production, assembly and shipping, for individual items, pallets or boxes. Our range includes vehicles in various sizes for automated goods transport and other applications such as warehouse management or order picking. Several vehicles can be combined in one system. Charging stations and other auxiliary devices are integrated as required.

Automated transport is made possible by fleet management software that can be easily integrated into your existing ERP/WMS and combines a wide range of important functions, from task management to statistical analysis.

FLEXIBLE OPERATION

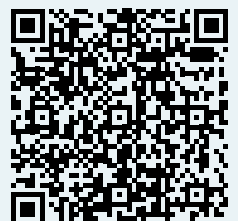

LISTA AGV solutions offer multiple levels of functionality, from the autonomous control of individual vehicles via tablet through to full integration with your existing ERP or warehouse management system.

REAL COST SAVINGS

Immediate savings of up to 40% can be achieved on average, thanks to automation. Additional indirect benefits include time savings and a reduced error rate. In this way, LISTA AGVs ensure greater competitiveness and profitability in the long term.
